

# Rajan Modanwal

## AWS Cloud Engineer

✉ rajandev55555@gmail.com ☎ 9792215616 🔗 LinkedIn 🔗 Portfolio 🔗 GitHub

### 👤 PROFILE

AWS Cloud Engineer with hands-on experience in deploying, managing, and optimizing cloud-based applications on AWS. Proficient in EC2, S3, IAM, VPC, Lambda, API Gateway, and CloudWatch, with strong exposure to serverless architectures, secure access control, monitoring, and troubleshooting. Familiar with CI/CD pipelines and Linux-based environments, focused on building scalable, secure, and reliable cloud solutions.

### 🧠 SKILLS

**AWS Services:** — EC2, S3, IAM, VPC, Lambda, API Gateway, CloudWatch, CloudFront, DynamoDB

**CI/CD:** — GitHub Actions, automated build & deployment pipelines

**Networking:** — VPC, Subnets (Public/Private), Route Tables, Security Groups, NACLs, NAT Gateway, DNS basics

**Security & IAM:** — IAM Users, Roles, Policies, least-privilege access, security best practices

**Serverless & APIs:** — AWS Lambda, API Gateway, REST API development and integration

**Monitoring & Troubleshooting:** — CloudWatch Logs, metrics, alarms, debugging deployment issues

**Full-Stack (Support Level):** — REST APIs, backend integration for cloud-hosted applications

### 🎓 EDUCATION

**MCA** 07/2024 – Present | Dehradun, India  
Uttaranchal University

**BCA** 07/2020 – 06/2023 | Varanasi, India  
Microtek College of Management and Technology

**Jetking Certified** 01/2018 – 10/2019 | Varanasi, India  
Computer Hardware & Networking Engineering

### 📁 PROJECTS

#### Serverless Web Application with Real-time Visitor Analytics ☑

Tech Stack: AWS Lambda, API Gateway, Amazon S3, DynamoDB, CloudWatch

- **Architecture:** Designed a fully serverless backend using **API Gateway** and **AWS Lambda** (Python/Node.js) to handle dynamic web requests.
- **Data Management:** Integrated **Amazon DynamoDB** to persist and increment visitor counts with millisecond latency.
- **Frontend:** Hosted a responsive static website on **Amazon S3**, utilizing the `fetch()` API for asynchronous communication with backend endpoints.
- **Security:** Enforced **IAM least-privilege** policies to ensure secure communication between AWS services.
- **Observability:** Leveraged **Amazon CloudWatch** for real-time monitoring of Lambda execution logs and API performance.
- **Result:** Eliminated infrastructure overhead and achieved 100% scalability with a **pay-as-you-go** cost model.

#### Cloud-Native Media Vault with Secure S3 Integration ☑

Tech Stack: AWS Amplify, Amazon S3, MongoDB, API Gateway, AWS Lambda, IAM

- **Architecture:** Developed a full-stack media management application hosted on **AWS Amplify**, ensuring a seamless CI/CD pipeline from GitHub to production.
- **Secure Storage:** Implemented **Amazon S3** for scalable file storage, utilizing pre-signed URLs to allow secure uploads
- **Database Management:** Integrated **MongoDB** to store and manage file metadata, enabling efficient search, retrieval, and categorization of user-uploaded media.
- **Serverless Logic:** Built a RESTful API using **API Gateway** and **AWS Lambda**
- **Outcome:** Created a high-performance, secure media gallery that handles file uploads with zero server management overhead.
